

Oxford Anatomy & Physiology ranked #1 in QS World Rankings by subject 2017, 2018, 2020, 2021, 202, 2023 and 2024

Job description and Selection Criteria

Job title	Research Assistant: "Neuronal cell biologist in Stem cell-derived neuronal models of Parkinson's disease"
Division	Medical Sciences Division
Department	Physiology, Anatomy & Genetics
Location	Kavli Institute for Nanoscience Discovery, Dorothy Crowfoot Hodgkin Building, Parks Road, Oxford, OX1 3QU
Grade and salary	Grade 6: £32,332 - £36,024 per annum
Hours	Full time
Contract type	Fixed term: available from September 1st 2024 until 31st December 2025
Reporting to	Prof Richard Wade-Martins
Vacancy reference	AV24032 HRIS: 173472

Research topic	Stem cell-derived neuronal models of Parkinson's disease
Principal Investigator / supervisor	Professor Richard Wade-Martins
Project team	The Research Assistant will become part of the Laboratory of Molecular Neurodegeneration, a highly active research group consisting of approximately thirty research scientists, comprising a mix of research fellows, post-doctoral research scientists, DPhil students and research assistants. Group members come from a mix of scientific and medical backgrounds, creating an exciting environment for research. This highly collaborative project offers an opportunity to undertake translation work in an exceptional academic setting.
Project web site	www.dpag.ox.ac.uk/opdc https://www.dpag.ox.ac.uk/research/wade-martins-group https://www.imcm.ox.ac.uk
Funding partner	This Grade 6 post is funded by the new Oxford/GSK Institute of Molecular and Computational Medicine (https://www.imcm.ox.ac.uk).
Recent publications	Williamson MG, Madureira M, McGuinness W, Heon-Roberts R, Mock ED, Naidoo K, Cramb KML, Caiazza MC, Belen Malpartida A, Lavelle M, Savory

	K, Humble SW, Patterson R, Davis JB, Connor-Robson N, Ryan BJ and Wade-Martins R (2023) Mitochondrial dysfunction and mitophagy defects in LRRK2-R1441C Parkinson's disease models. <i>Hum Mol Genet.</i> 32(18):2808-2821. Technical Skills	• Maintenance and banking of human iPSC lines • Differentiation of human iPSC lines into neurons and glia • Analysis of cellular phenotypes using high-content imaging Molecular and cell biology, gene expression, protein biochemistry

The role

Supervisors: Prof Richard Wade-Martins and Dr Brent Ryan

This post provides an exciting opportunity to join the newly established multidisciplinary Oxford-GSK Institute for Molecular & Computational Medicine (IMCM) team at the Department of Physiology, Anatomy and Genetics (DPAG). The Institute brings together the very best scientific, clinical, technological and computational expertise from Oxford University and GSK to form unique industry/academic partnership. The aim of the institute is to improve tools in, and knowledge from, genetics, genomics, molecular and single cell biology, spatial imaging, machine learning and novel methods of data handling to study the pattern of diseases in new ways. The Institute will develop disease agnostic platforms to change the clinical practice of pathology, helping to identify and validate early potential drug targets, and biomarkers to predict disease progression.

We are looking to now recruit a highly motivated Research Assistant to support the characterisation of induced pluripotent stem cell (iPSC) lines within the DPAG team in the first instance, working under the

supervision of Dr Brent Ryan (DPAG) and reporting to Professor Richard Wade-Martins (DPAG), Director of the Oxford Parkinson's Disease Centre (OPDC).

The successful candidate will be based at the Department of Physiology, Anatomy and Genetics, Kavli Institute for Nanoscience Discovery, South Parks Road, Oxford in the Laboratory of Molecular Neurodegeneration headed by Professor Wade-Martins. He or she will be exposed to cutting edge academic research in neuronal cell biology with a focus on identifying biological disease pathways with translational potential.

Responsibilities

The post-holder will:

- Undertake maintenance culture of iPSC lines and maintain excellent records and database management to track the iPSC stocks
- Differentiate iPSC lines into dopamine neurons and glial cultures
- Undertake cellular characterisation of iPSC-derived neurons and glia focussed on organelle phenotypes
- Contribute to wider project planning, including ideas for new research projects
- Determine the most appropriate methodologies to test hypotheses, and identify suitable alternatives if technical problems arise
- Select, follow, and adapt experimental protocols
- Gather, analyse, and present scientific data from a variety of sources
- Contribute to scientific reports and journal articles and the presentation of data/papers at conferences
- Manage own research and administrative activities, within guidelines provided by senior colleagues
- Collaborate effectively with other team members to achieve collective goals

Other Duties

- Participate in a regular Annual Review.
- Undertake any necessary training identified and continuing professional development in order to stay up-to-date professionally including annual Information Governance training.
- Comply with Health and safety regulations.
- Comply with the policies and procedures set out in the Handbook for University Support staff (or) Academic-Related staff.
- Any other duties that may be required from time to time commensurate with the grade of the job.

This job description should be regarded only as a guide to the duties required and is not intended to be definitive. It may be reviewed in the light of a change in circumstances following consultation with the post holder. The Job Description does not form part of the contract.

Please note that the appointment of the successful candidate will be subject to standard compulsory pre-employment screening, such as right to work checks.

Selection criteria

Essential selection criteria

- Hold or be near to completion of BSc or MSc degree in neuroscience or cell/molecular biology or equivalent.
- Experience in neuronal/glial cell culture, preferably in human pluripotent stem cells
- Experience in setting up cellular assays, including image-based experiments

- Knowledge of neurodegenerative diseases, such as Parkinson's
- The candidate will be highly motivated, with the capacity to think creatively and work across teams
- Commitment to engaging with, and promoting awareness of, equality, diversity and inclusion and embedding these into your work.

Desirable selection criteria

- Experience and/or knowledge of Parkinson's-relevant cell biology
- Understanding of lysosomal and mitochondrial biology

Pre-employment screening

Standard checks

If you are offered the post, the offer will be subject to standard pre-employment checks. You will be asked to provide: proof of your right-to-work in the UK; proof of your identity; and (if we haven't done so already) we will contact the referees you have nominated. You will also be asked to complete a health declaration so that you can tell us about any health conditions or disabilities for which you may need us to make appropriate adjustments.

Please read the candidate notes on the University's pre-employment screening procedures at:

<https://www.jobs.ox.ac.uk/pre-employment-checks>

Hazard-specific / Safety-critical duties

This job includes hazards or safety-critical activities. If you are offered the post, you will be asked to complete a health questionnaire which will be assessed by our Occupational Health Service, and the offer of employment will be subject a successful outcome of this assessment.

The hazards or safety-critical duties involved are as follows:

- Lone Working
- Regular manual handling
- Work with allergens, Eg laboratory animals, pollen, dust, fish or insects etc.
- Work with any substance which has any of the following pictograms on their MSDS:

Additional security pre-employment check

This job includes duties that will require additional security pre-employment checks:

- A satisfactory basic Disclosure and Barring Service check
- University security screening (eg identity checks)

About the University of Oxford

Welcome to the University of Oxford. We aim to lead the world in research and education for the benefit of society both in the UK and globally. Oxford's researchers engage with academic, commercial and cultural partners across the world to stimulate high-quality research and enable innovation through a broad range of social, policy and economic impacts.

We believe our strengths lie both in empowering individuals and teams to address fundamental questions of global significance, while providing all our staff with a welcoming and inclusive workplace that enables everyone to develop and do their best work. Recognising that diversity is our strength, vital for innovation and creativity, we aspire to build a truly diverse community which values and respects every individual's unique contribution.

While we have long traditions of scholarship, we are also forward-looking, creative and cutting-edge. Oxford is one of Europe's most entrepreneurial universities and we rank first in the UK for university spin-outs, and in recent years we have spun out 15-20 new companies every year. We are also recognised as leaders in support for social enterprise.

Join us and you will find a unique, democratic and international community, a great range of staff benefits and access to a vibrant array of cultural activities in the beautiful city of Oxford. For more information, please visit www.ox.ac.uk/about/organisation.

The Department of Physiology, Anatomy and Genetics

Oxford Anatomy and Physiology ranked #1 in the QS World University Rankings by subject 2017, 2018, 2020 2021, 2022, 2023 and 2024.

Our mission is empowering discovery in the physiological sciences to improve health and educate the next generation of doctors and biomedical scientists. For more information, please visit www.dpag.ox.ac.uk

The Department of Physiology, Anatomy and Genetics holds a silver Athena Swan award to recognise advancement of gender equality: representation, progression and success for all.

The Department is a large pre-clinical department within the Medical Sciences Division, with ca. 500 staff and students. It has a world-class reputation in both its research and teaching. The Department was part of the University of Oxford's Biological Sciences submission to the Research Excellence Framework 2021 that was rated top for its world-leading research. Moreover, Oxford's Anatomy and Physiology has been ranked number one in the QS World University Rankings for the past five years. Please see the 2022/2023 annual report: <https://www.dpag.ox.ac.uk/news/annual-report-2022-2023>

Information about faculty in the Department

Professor David Paterson FRSNZ is the Head of Department. There are five named Professors: the Dr Lee's Professor of Anatomy (vacant) the Waynflete Professor of Physiology (Professor Gero Miesenböck, FRS FMedSci), the BHF Professor of Regenerative Medicine, Development and Reproduction (Professor Paul Riley, FMedSci), the Krebs Chair in Physiological Metabolism (vacant) and the John Black Professor of Bionanoscience (Professor Dame Molly Stevens, FREng, FRS). Other appointments include four Research Professors (Professor Dame Frances Ashcroft, FRS; Emeritus Professor Dame Kay Davies CBE, FRS FMedSci; Professor Scott Waddell FMedSci; Professor Anant Parekh FMedSci FRS), one Wellcome Trust Principal Research Fellow (Professor Andrew King, FMedSci FRS), 13 further full professors and 15 associate professors. There are approximately 175 academic-related research staff supported by external grants and over 100 graduate students registered for higher degrees in the Department. The teaching and the research activities of the department are supported by teams of professional services and technical staff.

Research Centres/Institutes and research themes

The Department has a distinctive, forward-looking, and integrative biomedical research programme organised into four research Centres with a presence in two research institutes <https://www.dpag.ox.ac.uk/>. We also have strong cross-cutting themes in cardiac sciences, cell physiology, development and cell biology, functional genomics, metabolism and endocrinology, and neuroscience, which map on to the research centres. These include the Centre for Integrative Neuroscience (Director: Professor A King FRS), Centre for Neural Circuits and Behaviour (Director: Professor G Miesenböck FRS), Centre for Cellular & Molecular Neurobiology (Emeritus Professor Dame Kay Davies FRS and Professor Dame Frances Ashcroft FRS), Centre for Integrative Physiology (Professor A Parekh FRS)/the Burdon Sanderson Cardiac Science Centre (Director: Professor Manuela Zaccolo FRSB). The Institute for Developmental and Regenerative Medicine (IDRM: Director Professor Paul Riley FMedSci) and the new Kavli Institute for Nanoscience Discovery, which is directly opposite the Sherrington building.

<https://kavlifoundation.org/news/meet-new-kavli-institute-nanoscience-discovery-university-oxford>

The Research Centres and thematic areas bring together researchers who address a range of fundamental issues in the biosciences at molecular, cellular, tissue and systems levels of organisation. <https://www.dpag.ox.ac.uk/centres>

For more information, please visit www.dpag.ox.ac.uk

The Oxford Parkinson's Disease Centre

The Oxford Parkinson's Disease Centre (OPDC; www.opdc.ox.ac.uk) headed by Professor Wade-Martins is an international research Centre for Parkinson's disease established in February 2010. We have exploited a unique interdisciplinary research environment bringing together scientists and clinicians to create a centre of excellence focused on understanding the earliest pathological pathways in PD. Internationally-recognised scientists with strengths in stem cell models, genetics and genomics, transgenic rodent models, the structure and function of brain cells and circuits affected in PD, magnetic resonance imaging (MRI), and analysis of protein biomarkers, are working closely with experts in epidemiology and clinical neurology to better understand the causes of PD.

Our translational program is focused both on *understanding the molecular pathways to Parkinson's* and on

targeting the molecular pathways to Parkinson's exploiting new tools (i) to stratify the **progression** of PD; (ii) to **predict** the onset of PD; (iii) to identify **potential targets** through generating mechanism-based rationale; and (iv) to validate new disease-modifying treatments to **prevent** the development of PD. We have built a multi-disciplinary research program across the translational space comprising the OPDC Discovery Cohort as one of the best-characterised clinical PD cohorts in the world, a program in laboratory biomarkers, a core expertise in molecular genetics and molecular neuropathology, the largest induced pluripotent stem-cell (iPSC) research program in PD in Europe, and a world-leading research hub for the generation and deep-phenotyping of transgenic rodent models of PD.

For more information please visit: www.dpag.ox.ac.uk/opdc

Laboratory of Molecular Neurodegeneration

The Laboratory of Molecular Neurodegeneration led by Professor Wade-Martins at the Department of Physiology, Anatomy and Genetics (DPAG) studies the molecular mechanisms of a range of human neurological diseases with the ultimate aim of developing novel therapies. The Laboratory plays a leading role in the OPDC integrating studies in post-mortem human brain tissue, transgenic and knock-out mouse and rat models, and iPSC-derived neuronal models of Parkinson's disease.

Our work is highly interdisciplinary in nature and our research program has thrived through many collaborations within DPAG and in the South Park Road science area, and through interaction with scientific and clinical colleagues across Oxford.

Our laboratory is part of the Kavli Institute for Nanoscience Discovery, an exciting new interdisciplinary research building at the University of Oxford facilitating interactive collaborative opportunities across cellular, molecular and physical sciences.

For further information on our work, see: <https://www.dpag.ox.ac.uk/research/wade-martins-group>

The Kavli Institute for Nanoscience Discovery (Kavli INsD)

“Where the physical sciences are brought into the cell”

Leading scientific discovery into the most basic unit of life - the cell - the Kavli Institute for Nanoscience Discovery (Kavli INsD) is located at the heart of Oxford University's science area and was inaugurated in March 2021.

With over 30 faculty and 450 research staff and graduate students, world leading teams collaborate from multiple departments (biochemistry, cell biology, chemistry, physics, physiology, psychiatry, clinical neurosciences and engineering) to contribute to global health.

By bringing multiple disciplines together under the same roof to advance scientific research the Kavli INsD creates an environment that encourages the cross-pollination of ideas and inter-disciplinary cooperation. The Institute comes together to work on global health challenges and benefits from the close proximity of the scientific departments as well as advanced imaging facilities and state-of-the-art-instrumentation. As the first Director of Kavli INsD Professor Dame Carol Robinson and the research teams are creating a culture that is both bold and respectful.

The University of Oxford's, Kavli Institute for Nanoscience Discovery is the U.S based Kavli Foundation's 20th institute. The foundation, established in the year 2000 by Fred Kavli, has a mission “to advance science for the benefit of humanity”. Research institutes in the fields of nanoscience, astrophysics, neuroscience, and theoretical physics have been endowed by the foundation which also supports programs that strengthen the connection between science and society. Learn more at kavlifoundation.org

Research support facilities

The Department has shared state-of-the-art facilities for a wide range of applications, such as a histology service, DNA/RNA services (rapid and supportive access to microRNA, RNASeq, CHIPSeq, etc.), confocal and other high resolution imaging equipment as well as a Transmission Electron Microscope. Proteomics facilities include MALDI-TOF/TOF and Ion Trap LC-MS/MS systems, and there are extensive magnetic resonance spectroscopy (MRS) and imaging (MRI) facilities for in vivo rodent and clinical investigations, including hyperpolarised

technologies. The Department also provides central support in photography, digital imaging, and poster printing as well as a high-quality mechanical workshop. A dedicated research support team helps with grant applications and awards, and data storage and computation facilities. The department is supported by a dedicated IT team.

Teaching

The main teaching responsibility of the Department is for pre-clinical Medicine students and those reading Biomedical Sciences. There are also contributions to teaching in Biochemistry, Biological Sciences, Human Sciences, Physics, and a graduate Neuroscience MSc programme.

In Oxford, Medicine students take a three-year pre-clinical course before proceeding to clinical training (a further three years). The first five terms of the three-year pre-clinical course provide broad training in all aspects of medical science (leading to the 1st BM qualification). Both pre-clinical

Medicine and Biomedical Sciences students spend the last four terms of their course studying for a BA degree, selecting two Advanced Options from a choice of ten, ranging from systems physiology and neuroscience to cellular and molecular science. Both cohorts also undertake an experimental project, which forms one paper in their final examination; these projects are supervised by members of the academic staff. The Department also contributes some preclinical teaching to the first part of the Graduate entry Medicine course.

Equality, Diversity and Inclusion in DPAG

The Department of Physiology, Anatomy and Genetics (DPAG) is committed to promoting a diverse and inclusive community. We have an active Equality, Diversity, and Inclusion (EDI) committee and are pro-active in promoting race equality. We hold an Athena SWAN silver award in recognition of our efforts to introduce organisational and cultural practices, which promote gender equality and create a better working environment for all. The Department promotes family-friendly policies and supports flexible working arrangements where possible. The University offers 450 nursery places for staff and students at five dedicated University nurseries and a network of local community nurseries. We will be happy to provide you with information about nurseries and schools in Oxford upon request.

We encourage applications from suitably qualified, experienced, and eligible candidates regardless of sex, race, disability, age, sexual orientation, transgender status, religion or belief, marital status, or pregnancy and maternity. We embrace our differences, and you are very welcome at DPAG, without the need to hide any part of who you are.

Applications are particularly welcome from women and black and minority ethnic heritage candidates, who are under-represented in academic posts in Oxford.

To learn more about EDI in DPAG, visit our website: <https://www.dpag.ox.ac.uk/work-with-us/equality-diversity-inclusion>

For more information about the University's family friendly benefits, please also see <https://hr.admin.ox.ac.uk/information-for-parents-and-carers>

Potential applicants may email heidi.de-wet@dpag.ox.ac.uk and/or sally.vine@dpag.ox.ac.uk to discuss any

The Medical Sciences Division

The Medical Sciences Division is an internationally recognized centre of excellence for biomedical and clinical research and teaching. We are the largest academic division in the University of Oxford.

World-leading programmes, housed in state-of-the-art facilities, cover the full range of scientific endeavour from the molecule to the population. With our NHS partners we also foster the highest possible standards in patient care.

For more information please visit: www.medsci.ox.ac.uk

How to apply

Applications are made through our online recruitment portal. Information about how to apply is available on our Jobs website <https://www.jobs.ox.ac.uk/how-to-apply>.

Your application will be judged solely on the basis of how you demonstrate that you meet the selection criteria stated in the job description.

As part of your application, you will be asked to provide details of two referees and indicate whether we can contact them now.

You will be asked to upload a CV and a supporting statement. The supporting statement must explain how you meet each of the selection criteria for the post using examples of your skills and experience. This may include experience gained in employment, education, or during career breaks (such as time out to care for dependants)

Please upload all documents **as PDF files** with your name and the document type in the filename.

All applications must be received by **midday** UK time on the closing date stated in the online advertisement.

Information for priority candidates

A priority candidate is a University employee who is seeking redeployment because they have been advised that they are at risk of redundancy, or on grounds of ill-health/disability. Priority candidates are issued with a redeployment letter by their employing department(s).

If you are a priority candidate, please ensure that you attach your redeployment letter to your application (or email it to the contact address on the advert if the application form used for the vacancy does not allow attachments).

If you need help

Application FAQs, including technical troubleshooting advice is available at:
<https://staff.web.ox.ac.uk/recruitment-support-faqs>

Non-technical questions about this job should be addressed to the recruiting department directly at hr@dpag.ox.ac.uk.

To return to the online application at any stage, please go to: www.recruit.ox.ac.uk.

Please note that you will receive an automated email from our online recruitment portal to confirm receipt of your application. **Please check your spam/junk mail** if you do not receive this email.
aspect of EDI in DPAG.

Important information for candidates

Data Privacy

Please note that any personal data submitted to the University as part of the job application process will be processed in accordance with the GDPR and related UK data protection legislation. For further information, please see the University's Privacy Notice for Job Applicants at: <https://compliance.admin.ox.ac.uk/job-applicant-privacy-policy>. The University's Policy on Data Protection is available at: <https://compliance.admin.ox.ac.uk/data-protection-policy>.

The University's policy on retirement

The University operates an Employer Justified Retirement Age (EJRA) for very senior research posts at **grade RSIV/D35 and clinical equivalents E62 and E82**, which with effect from 1 October 2023 will be 30 September before the 70th birthday. The justification for this is explained at: <https://hr.admin.ox.ac.uk/the-ejra>.

For **existing** employees on these grades, any employment beyond the retirement age is subject to approval through the procedures: <https://hr.admin.ox.ac.uk/the-ejra>.

There is no normal or fixed age at which staff in posts at other grades have to retire. Staff at these grades may elect to retire in accordance with the rules of the applicable pension scheme, as may be amended from time to time.

Equality of Opportunity

Entry into employment with the University and progression within employment will be determined only by personal merit and the application of criteria which are related to the duties of each particular post and the relevant salary structure. In all cases, ability to perform the job will be the primary consideration. No applicant or member of staff shall be discriminated against because of age, disability, gender reassignment, marriage or civil partnership, pregnancy or maternity, race, religion or belief, sex, or sexual orientation.

Benefits of working at the University

Employee benefits

University employees enjoy 38 days' paid holiday, generous pension schemes, travel discounts, and a variety of professional development opportunities. Our range of other employee benefits and discounts also includes free entry to the Botanic Gardens and University colleges, and discounts at University museums. See <https://hr.admin.ox.ac.uk/staff-benefits>

University Club and sports facilities

Membership of the University Club is free for all University staff. The University Club offers social, sporting, and hospitality facilities. Staff can also use the University Sports Centre on Iffley Road at discounted rates, including a fitness centre, powerlifting room, and swimming pool. See www.club.ox.ac.uk and <https://www.sport.ox.ac.uk/>.

Information for staff new to Oxford

If you are relocating to Oxfordshire from overseas or elsewhere in the UK, the University's Welcome Service website includes practical information about settling in the area, including advice on relocation, accommodation, and local schools. See <https://welcome.ox.ac.uk/>

There is also a visa loan scheme to cover the costs of UK visa applications for staff and their dependants. See <https://staffimmigration.admin.ox.ac.uk/visa-loan-scheme>

Family-friendly benefits

With one of the most generous family leave schemes in the Higher Education sector, and a range of flexible working options, Oxford aims to be a family-friendly employer. We also subscribe to the Work+Family Space, a service that provides practical advice and support for employees who have caring responsibilities. The service offers a free telephone advice line, and the ability to book emergency back-up care for children, adult dependents and elderly relatives. See <https://hr.admin.ox.ac.uk/my-family-care>

The University has excellent childcare services, including five University nurseries as well as University-supported places at many other private nurseries.

For full details, including how to apply and the costs, see <https://childcare.admin.ox.ac.uk/>

Disabled staff

We are committed to supporting members of staff with disabilities or long-term health conditions. For further details, including information about how to make contact, in confidence, with the University's Staff Disability Advisor, see <https://edu.admin.ox.ac.uk/disability-support>

Staff networks

The University has a number of staff networks including the Oxford Research Staff Society, BME staff network, LGBT+ staff network and a disabled staff network. You can find more information at <https://edu.admin.ox.ac.uk/networks>

The University of Oxford Newcomers' Club

The University of Oxford Newcomers' Club is an organisation run by volunteers that aims to assist the partners of new staff settle into Oxford, and provides them with an opportunity to meet people and make connections in the local area. See www.newcomers.ox.ac.uk.

Oxford Research Staff Society (OxRSS)

A society run by and for Oxford University research staff. It offers researchers a range of social and professional networking opportunities. Membership is free, and all researchers employed by Oxford University are welcome to join. Subscribe at researchstaff-subscribe@maillist.ox.ac.uk to join the mailing list to find out about upcoming events and other information for researchers, or contact the committee on committee@oxrss.ox.ac.uk. For more information, see www.ox.ac.uk/oxrss, Twitter @ResStaffOxford, and Facebook www.facebook.com/oxrss.
